AGENDA

- A. Disposition of Minutes for Meeting Held June 5, 2012**
- B. Old Business**
- C. Subcommittee Item**
 - 1. Discussion Items**
 - a. YSU Foundation Annual Report**
Paul McFadden, President, YSU Foundation, will report on the Foundation's return on the endowment funds managed for the University.
 - b. Hartland & Co. September 18, 2012 Non-Endowment Assets Update** **Tab 1**
Mike Shebak and Sarah Parker will report.
 - c. Investment Update from PNC**
Barry Hollis and William Mitchner will report.
 - d. Hartland & Co. June Quarterly University Investments Update** **Tab 2**
Mike Shebak and Sarah Parker will report.
 - e. Hartland & Co. July Monthly Flash Report Update** **Tab 3**
Mike Shebak and Sarah Parker will report.
- D. New Business**
- E. Adjournment**

Second Quarter 2012 Economic Update

- Macro factors continue to influence risk sentiment.
- The U.S. economy will continue to grow modestly in the face of deleveraging and high unemployment.
 - “Fiscal Cliff” is a primary risk to the U.S. outlook.
- Initial steps toward fiscal union and bank reform represent important progress in the Euro Zone’s long path to recovery.
 - Euro Zone policymakers continue to stumble toward reform.
- Stock valuations reflect uncertainty.
- Fixed income offers some stability but little return potential.
- 2Q2012 was a challenging environment for active management.

Disclosures

Information provided is general in nature, is provided for informational purposes only, and should not be construed as investment advice. Any views expressed are based upon the data available at the time the information was produced and are subject to change at any time based on market or other conditions. Hartland disclaims any liability for any direct or incidental loss incurred by applying any of the information in this presentation. All investment decisions must be evaluated as to whether it is consistent with their investment objectives, risk tolerance, and financial situation.

Past performance is no guarantee of future results. Investing involves risk, including risk of loss. Diversification does not ensure a profit or guarantee against loss.

All indices are unmanaged and performance of the indices includes reinvestment of dividends and interest income and, unless otherwise noted. An investment cannot be made in any index.

Although bonds generally present less short-term risk and volatility than stocks, bonds do contain interest rate risk (as interest rates rise, bond prices usually fall and vice versa) and the risk of default, or the risk that an issuer will be unable to make income or principal payments. Additionally, bonds and short-term investments entail greater inflation risk, or the risk that the return of an investment will not keep up with increases in the prices of goods and services, than stocks.

Lower-quality debt securities generally offer higher yields, but also involve greater risk of default or price changes due to potential changes in the credit quality of the issuer. Any fixed income security sold or redeemed prior to maturity may be subject to loss.

The municipal market is volatile and can be significantly affected by adverse tax, legislative, or political changes and by the financial condition of the issuers of municipal securities. Interest rate increases can cause the price of a debt security to decrease. A portion of the dividends you receive may be subject to federal, state, or local income tax or may be subject to the federal alternative minimum tax. Generally, tax-exempt municipal securities are not appropriate holdings for tax advantaged accounts such as IRAs and 401(k)s.

Stock markets, especially foreign markets, are volatile and can decline significantly in response to adverse issuer, political, regulatory, market, or economic developments. Foreign securities are subject to interest-rate, currency-exchange-rate, economic, and political risks, all of which are magnified in emerging markets. The securities of smaller, less well-known companies can be more volatile than those of larger companies. Growth stocks can perform differently from the market as a whole and other types of stocks and can be more volatile than other types of stocks. Value stocks can perform differently than other types of stocks and can continue to be undervalued by the market for long periods of time.

The commodities industry can be significantly affected by commodity prices, world events, import controls, worldwide competition, government regulations, and economic conditions.

Changes in real estate values or economic conditions can have a positive or negative effect on issuers in the real estate industry, which may affect your investment.

Index Definitions:

The **S&P 500 Index** is a broad-based market index, comprised of 500 large-cap companies, generally considered representative of the stock market as a whole. The **S&P 400 Index** is an unmanaged index considered representative of mid-sized U.S. companies. The **S&P 600 Index** is a market-value weighted index that consists of 600 small-cap U.S. stocks chosen for market size, liquidity and industry group representation.

The **Russell 1000 Value Index**, **Russell 1000 Index** and **Russell 1000 Growth Index** are indices that measure the performance of large-capitalization value stocks, large-capitalization stocks and large-capitalization growth stocks, respectively. The **Russell 2000 Value Index**, **Russell 2000 Index** and **Russell 2000 Growth Index** are indices that measure the performance of small-capitalization value stocks, small-capitalization stocks and small-capitalization growth stocks, respectively. The **Russell Midcap Value Index**, **Russell Midcap Index** and **Russell Midcap Growth Index** are indices that measure the performance of mid-capitalization value stocks, mid-capitalization stocks and mid-capitalization growth stocks, respectively. The **Russell 2500 Value Index**, **Russell 2500 Index** and **Russell 2500 Growth Index** measure the performance of small to mid-cap value stocks, small to mid-cap stocks and small to mid-cap growth stocks, respectively, commonly referred to as "smid" cap. The **Russell 3000 Value Index**, **Russell 3000 Index** and **Russell 3000 Growth Index** measure the performance of the 3,000 largest U.S. value stocks, 3,000 largest U.S. stocks and 3,000 largest U.S. growth stocks, respectively, based on total market capitalization.

The **Wilshire 5000 Index** represents the broadest index for the U.S. equity market, measuring the performance of all U.S. equity securities with readily available price data. The **Wilshire Micro Cap Index** is a market capitalization-weighted index comprised of all stocks in the Wilshire 5000 Index below the 2,501st rank.

The **MSCI EAFE (Europe, Australasia, Far East) Index** is designed to measure developed market equity performance, excluding the U.S. and Canada. The **MSCI Emerging Markets (EM) Index** is designed to measure global emerging market equity performance. The **MSCI World Index** is designed to measure global developed market equity performance. The **MSCI World Index Ex-U.S. Index** is designed to measure the equity market performance of developed markets and excludes the U.S. The **MSCI Europe Index** is an unmanaged index considered representative of developed European countries. The **MSCI Japan Index** is an unmanaged index considered representative of stocks of Japan. The **MSCI Pacific ex. Japan Index** is an unmanaged index considered representative of stocks of Asia Pacific countries excluding Japan.

The **U.S. 10-Year treasury Yield** is generally considered to be a barometer for long-term interest rates.

Merrill Lynch 91-day T-bill index includes U.S. Treasury bills with a remaining maturity from 1 up to 3 months.

The Barclays Capital® (BC) U.S. Treasury Index is designed to cover public obligations of the U.S. Treasury with a remaining maturity of one year or more. The BC Aggregate Bond Index is an unmanaged, market value-weighted performance benchmark for investment-grade fixed-rate debt issues, including government, corporate, asset-backed, and mortgage-backed securities with maturities of at least one year. The BC U.S. Credit Bond Index is designed to cover publicly issued U.S. corporate and specified foreign debentures and secured notes that meet the specified maturity, liquidity, and quality requirements; bonds must be SEC-registered to qualify. The BC U.S. Agency Index is designed to cover publicly issued debt of U.S. Government agencies, quasi-federal corporations, and corporate or foreign debt guaranteed by the U.S. Government. The BC CMBS Index is designed to mirror commercial mortgage-backed securities of investment-grade quality (Baa3/BBB-/BBB- or above) using Moody's, S&P, and Fitch respectively, with maturity of at least one year. The BC MBS Index covers agency mortgage-backed pass-through securities (both fixed-rate and hybrid ARMs) issued by Ginnie Mae (GNMA), Fannie Mae (FNMA), and Freddie Mac (FHLMC). The BC U.S. Municipal Bond Index covers the U.S. dollar-denominated, long-term tax-exempt bond market with four main sectors: state and local general obligation bonds, revenue bonds, insured bonds, and pre-refunded bonds. The BC TIPS Index is an unmanaged market index made up of U.S. Treasury Inflation Linked Index securities. The BC U.S. Government Bond Index is a market value-weighted index of U.S. Government fixed-rate debt issues with maturities of one year or more. The BC ABS Index is a market value-weighted index that covers fixed-rate asset-backed securities with average lives greater than or equal to one year and that are part of a public deal; the index covers the following collateral types: credit cards, autos, home equity loans, stranded-cost utility (rate-reduction bonds), and manufactured housing. The BC Global Aggregate Index is composed of three sub-indices; the U.S. Aggregate Index, Pan-European Aggregate Index, and the Asian-Pacific Aggregate Index. In aggregate the index is created to be a broad-based measure of the performance of investment grade fixed rate debt on a global scale. The BC US Corporate Long Aa Index is an unmanaged index representing public obligations of U.S. corporate and specified foreign debentures and secured notes with a remaining maturity of 10 years or more. The BC U.S. Corporate High-Yield Index measures the market of USD-denominated, non-investment grade, fixed-rate, taxable corporate bonds. The BC Intermediate Corporate Index includes dollar-denominated debt from U.S. and non-U.S. industrial, utility, and financial institutions issuers with a duration of 1-10 years. The BC U.S. Treasury Long Index is an unmanaged index representing public obligations of the U.S. Treasury with a remaining maturity of one year or more. The BC U.S. Government 10 Year Treasury Index measures the performance of U.S. Treasury securities that have a remaining maturity of less than 10 years. The BC BAA Corporate Index measures the performance of the taxable Baa rated fixed-rate U.S. dollar-denominated corporate bond market. The BC Global Treasury ex US Index includes government bonds issued by investment-grade countries outside the United States, in local currencies, that have a remaining maturity of one year or more and are rated investment grade or higher. The BC Emerging Market Bond Index is an unmanaged index that total returns for external-currency-denominated debt instruments of the emerging markets. The BC U.S. Securitized Bond Index is a composite of asset-backed securities, collateralized mortgage-backed securities (ERISA-eligible) and fixed rate mortgage-backed securities. The BC Quality Distribution AAA, B, and CC-D Indices measure the respective credit qualities of U.S. corporate and specified foreign debentures and secured notes. The BC Universal Index represents the union of the U.S. Aggregate Index, the U.S. High Yield Corporate Index, the 144A Index, the Eurodollar Index, the Emerging Markets Index, and the non-ERISA portion of the CMBS Index. The BC 1-3 Year Government Credit Index is an unmanaged index considered representative of performance of short-term U.S. corporate bonds and U.S. government bonds with maturities from one to three years. The BC Long-term Government Index is an unmanaged index reflecting performance of the long-term government bond market. The BC Intermediate Aggregate Index measures the performance of intermediate-term investment grade bonds. The BC Intermediate 1-3 Year Government/Credit Index measures the performance of U.S. Dollar denominated U.S. Treasuries, government-related and investment grade U.S. corporate securities that have a remaining maturity of greater than one year and less than ten years.

The Bank of America ML U.S. High Yield Index tracks the performance of below investment grade US Dollar Denominated corporate bonds publicly issued in the US market. Qualifying bonds have at least one year remaining term to maturity, are fixed coupon schedule and minimum outstanding of \$100 million.

Signal Identification Model (SIM) - The balance between fixed income and equity securities is guided by a proprietary, quantitative modeling technique we call "SIM". SIM is a four factor model that measures short-term under or over-valuation of equity markets. When SIM is negative, for example, the Investment Review Committee (IRC) may recommend that Consultants reduce equity ratios within prescribed ranges in client portfolios; when positive, that Consultants increase equity ratios within prescribed ranges. Other judgments, such as short-term, relative weights between different asset classes often come from fundamental assessments of IRC members. Unemployment - Total labor force seasonally adjusted (U.S. Bureau of Labor Statistics') ; ISM - An index based on surveys of more than 300 manufacturing firms by the Institute of Supply Management; Spread - indicates the difference in yield between Moody's AAA corporate bonds and Moody's BAA corporate bonds; S&P Earnings Yield - earnings per share for the most recent 12-month period divided by the current market price per share of the stocks in the S&P 500.

Hartland Research Portfolio (HPR) - Our Optimal Long-Term Strategic Asset Allocation, called the Hartland Research Portfolio, sets forth our best thinking on the mix of different asset classes; it is the benchmark we use in considering appropriate asset allocation for all client portfolios. The Hartland Research Portfolio is developed with two major inputs. One is quantitative, based on the Black-Litterman model, and one is qualitative, based on the input of the professionals on our Investment Research Committee (IRC). The Hartland & Co. research team begins with the Black-Litterman model, a mathematical model that seeks asset allocations that are optimal; those that produce the best results with the lowest level of volatility or risk. Black-Litterman is more dynamic than other models and builds on traditional mean-variance techniques to create stable and consistent return forecasts for a set of asset classes. The IRC assess the quantitative output from Black-Litterman and integrate it with their own fundamental or qualitative judgments. The result is the Hartland Research Portfolio, which combines quantitative and qualitative inputs and our capital market projections.

The HFRI Funds of Funds Index (HFRI FOF) is an equal weighted index designed to measure the performance of hedge fund of fund managers. The more than 800 multi-strategy constituents are required to have at least \$50 million in assets under management and a trading track record spanning at least 12 months. The index includes both on and offshore funds and all returns are reported in USD

The NCREIF Property Index (NPI) represents quarterly time series composite total rate of return measure of a very large pool of individual commercial real estate properties acquired in the private market. The index represents apartments, hotels, industrial properties, office buildings and retail properties which are at least 60% occupied and owned or controlled, at least in part by tax-exempt institutional investors or its designated agent. In addition these properties that are included must be investment grade, non-agricultural and income producing and all development projects are excluded. Constituents included in the NPI be valued at least quarterly, either internally or externally, using standard commercial real estate appraisal methodology. Each property must be independently appraised a minimum of once every three years.

The FTSE NAREIT All REITs Index is a market capitalization-weighted index that is designed to measure the performance of all tax-qualified Real Estate Investment Trusts (REITs) that are listed on the New York Stock Exchange, the American Stock Exchange, or the NASDAQ National Market List.

The Dow Jones U.S. Select Real Estate Securities Index is a float-adjusted market capitalization-weighted index of publicly traded real estate securities such as real estate investment trusts (REITs) and real estate operating companies (REOCs).

The Cambridge PE Index is a representation of returns for over 70% of the total dollars raised by U.S. leveraged buyout, subordinated debt and special situation managers from 1986 to December 2007. Returns are calculated based on the pooled time weighted return and are net of all fees. These pooled means represent the end to end rate of return calculated on the aggregate of all cash flows and market values reported by the general partners of the underlying constituents in the quarterly and annual reports.

The University of Michigan Consumer Sentiment Index is a consumer confidence index published monthly by the University of Michigan and Thomson Reuters. The index is normalized to have a value of 100 in December 1964.

VIX - The CBOE Volatility Index (VIX) is based on the prices of eight S&P 500 index put and call options.

Gold - represented by the dollar spot price of one troy ounce

WTI Crude - West Texas Intermediate is a grade of crude oil used as a benchmark in oil pricing.

The Affordability Index measures of a population's ability to afford to purchase a particular item, such as a house, indexed to the population's income

The Homeownership % is computed by dividing the number of owner-occupied housing units by the number of occupied housing units or households.

HFRI Emerging Markets: Asia ex-Japan, Global Index, Latin America Index, Russia/Eastern Europe Index: The constituents of the HFRI Emerging Markets Indices are selected according to their Regional Investment Focus only. There is no Investment Strategy criteria for inclusion in these indices. Funds classified as Emerging Markets have a regional investment focus in one of the following geographic areas: Asia ex-Japan, Russia/Eastern Europe, Latin America, Africa or the Middle East. **HFRI EH: Energy/Basic Materials** strategies which employ investment processes designed to identify opportunities in securities in specific niche areas of the market in which the Manager maintains a level of expertise which exceeds that of a market generalist. **HFRI EH: Equity Market Neutral** strategies employ sophisticated quantitative techniques of analyzing price data to ascertain information about future price movement and relationships between securities, select securities for purchase and sale. **HFRI EH: Quantitative Directional** strategies employ sophisticated quantitative techniques of analyzing price data to ascertain information about future price movement and relationships between securities, select securities for purchase and sale. **HFRI EH: Short-Biased** strategies employ analytical techniques in which the investment thesis is predicated on assessment of the valuation characteristics on the underlying companies with the goal of identifying overvalued companies. **HFRI EH: Technology/Healthcare** strategies employ investment processes designed to identify opportunities in securities in specific niche areas of the market in which the Manager maintain a level of expertise which exceeds that of a market generalist in identifying opportunities in companies engaged in all development, production and application of technology, biotechnology and as related to production of pharmaceuticals and healthcare industry. **HFRI ED: Distressed Restructuring** strategies which employ an investment process focused on corporate fixed income instruments, primarily on corporate credit instruments of companies trading at significant discounts to their value at issuance or obliged (par value) at maturity as a result of either formal bankruptcy proceeding or financial market perception of near term proceedings. **HFRI ED: Merger Arbitrage** strategies which employ an investment process primarily focused on opportunities in equity and equity related instruments of companies which are currently engaged in a corporate transaction. **HFRI ED: Private Issue/Regulation D** strategies which employ an investment process primarily focused on opportunities in equity and equity related instruments of companies which are primarily private and illiquid in nature. **HFRI Macro: Systematic Diversified** strategies have investment processes typically as function of mathematical, algorithmic and technical models, with little or no influence of individuals over the portfolio positioning. **HFRI RV: Fixed Income - Asset Backed** includes strategies in which the investment thesis is predicated on realization of a spread between related instruments in which one or multiple components of the spread is a fixed income instrument backed physical collateral or other financial obligations (loans, credit cards) other than those of a specific corporation. **HFRI RV: Fixed Income - Convertible Arbitrage** includes strategies in which the investment thesis is predicated on realization of a spread between related instruments in which one or multiple components of the spread is a convertible fixed income instrument. **HFRI RV: Fixed Income - Corporate** includes strategies in which the investment thesis is predicated on realization of a spread between related instruments in which one or multiple components of the spread is a corporate fixed income instrument. **HFRI RV: Multi-Strategies** employ an investment thesis is predicated on realization of a spread between related yield instruments in which one or multiple components of the spread contains a fixed income, derivative, equity, real estate, MLP or combination of these or other instruments. **HFRI RV: Yield Alternatives Index** strategies employ an investment thesis is predicated on realization of a spread between related instruments in which one or multiple components of the spread contains a derivative, equity, real estate, MLP or combination of these or other instruments. Strategies are typically quantitatively driven to measure the existing relationship between instruments and, in some cases, identify attractive positions in which the risk adjusted spread between these instruments represents an attractive opportunity for the investment manager.

The Consumer Price Index (CPI) is an inflationary indicator that measures the change in the cost of a fixed basket of products and services, including housing, electricity, food, and transportation. The CPI is published monthly. Unless otherwise noted, the CPI figure is as of the date this report is created.

The Credit Suisse Leveraged Loan Index is a market value-weighted index designed to represent the investable universe of the U.S. dollar-denominated leveraged loan market.

The Dow Jones-UBS Commodity Index measures the performance of the commodities market. It consists of exchange-traded futures contracts on physical commodities that are weighted to account for the economic significance and market liquidity of each commodity.

U.S. Economic Overview

As of 6/30/2012

Economic Environment

Source: Bureau of Economic Analysis & Bureau of Labor Statistics

Interest Rate Environment

Source: Bloomberg

The US economy (GDP) grew 1.9% in the first quarter of 2012, well below the 3.0% increase reported in the fourth quarter of 2011. The decline was largely attributable to a slowdown in spending by business and all levels of government. Imports, which are a subtraction in the calculation of GDP, also increased. Projections by the members of the Federal Reserve Board currently show GDP growing 1.9-2.4% in 2012.

The unemployment rate remained unchanged at 8.2% in June. Initial claims for unemployment have fallen to a four-year low, suggesting that the pace of layoffs continues to decline.

Core inflation - excluding food and energy - increased at a 2.3% annual rate in May, unchanged from the previous month. As in the previous report, shelter, medical care and used vehicles contributed to the increase. The index for all items - adding back food and energy - rose 1.7%, having peaked in September of last year at 3.9%. This decline has been driven primarily by the price of energy.

Corporate profitability in the first quarter (latest data available) declined at an annual rate of 0.3%. This was the first decline since the fourth quarter of 2008. Predictably, the decline can be attributed entirely to weakness in foreign markets. This headwind is almost certain to continue in the months ahead.

Despite the slowdown in earnings, companies are still inclined to return capital to shareholders. According to Standard & Poor's, aggregate dividends for 2012 could approach a record \$390 billion, an increase of roughly 15% over 2011. Despite this increase, the percentage of profits paid out in dividends by companies is still around 30%, well below the historic norm of roughly 50%.

During the quarter, investors finally began to focus on the so-called fiscal cliff that the US economy is approaching. This includes the expiration of the Bush tax cuts, the temporary payroll tax cuts and automatic spending cuts mandated by the failure of the Super Committee. Without Congressional action, roughly 4.0% of GDP is at risk. It would also represent that largest tax increase in history of the US.

Domestic Equity Market Overview

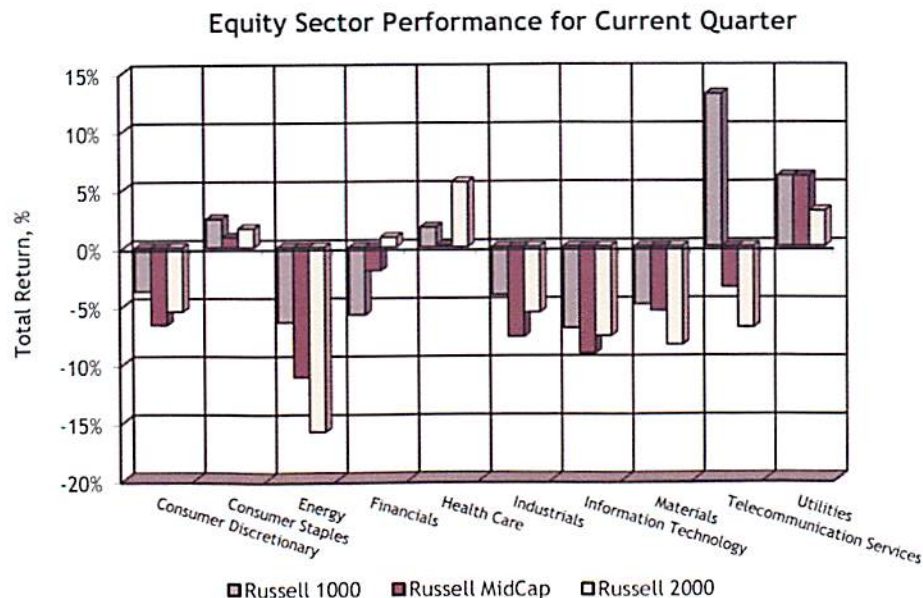

As of 6/30/2012

The domestic equity markets were negative for the second quarter despite rallying in June on hopes of progress in the European debt crisis. Value outperformed growth across the market cap spectrum and in general, large-cap outperformed small-cap. The best performing asset class was micro-cap; mid-cap growth was the worst.

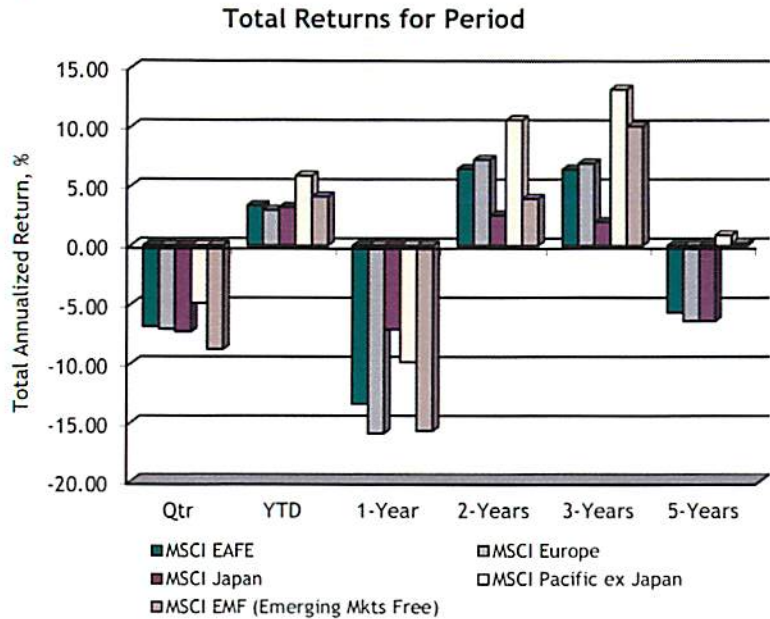

The second quarter was a risk-off quarter as equity managers became more risk averse. As a result, the more defensive sectors such as telecom, utilities and consumer staples delivered the best performance. The best performing sector was telecom at 14.1%. The more aggressive sectors such as technology performed poorly and financials was the worst performing sector.

The trailing 12-month P/E ratio for the S&P 500 at the end of the second quarter was 14.4 while its 20-year average was 19.6. The 12-month forward P/E ratio for the S&P 500 was 12.3 while its 15-year average was 16.8. While these valuations are attractive from a long-term perspective, they may not adequately discount the tail risk that exists from macroeconomic risks on the horizon.

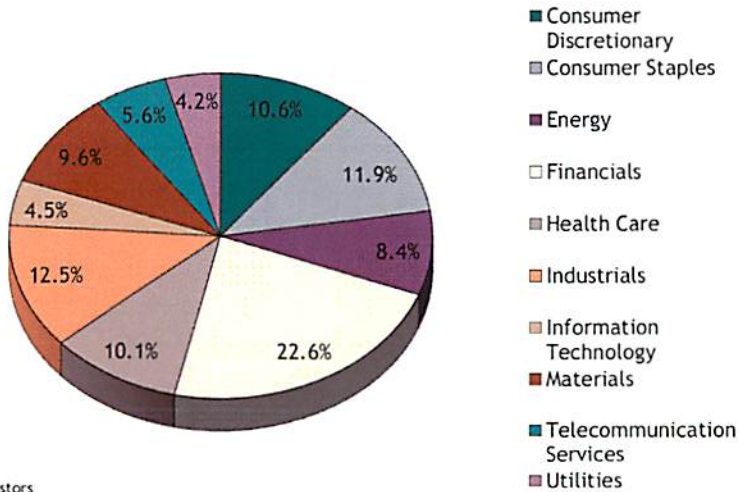

International Equity Market Overview

As of 6/30/2012

Source: State Street

MSCI EAFE Index Sector Weightings

Source: Barclays Global Investors

International equity markets were negative for the second quarter despite rallying in June on hopes of progress in the European debt crisis. Emerging markets lagged behind developed markets as fears of global economic deceleration increased. In developed markets, large caps outperformed small caps and value outperformed growth.

Developed international markets, as measured by the MSCI EAFE Index, were down 6.84% because of the uncertainty surrounding the European debt situation and its impact on the growth of the global economy. Globally, the euro zone countries performed the worst led by Finland down 23.8%, Portugal down 21.4%, Spain down 15.0% and Italy down 14.4%.

The 12-month forward P/E ratio for MSCI EAFE Index at the end of 2Q was 10.5 while its 10-year average was 13.0. While this may seem like an attractive valuation, the worst case scenario has not been priced into international equity markets. The 12-month forward P/E ratio for the MSCI Emerging Market Index was 9.6 while its 10-year average was 10.9. From a valuation standpoint, emerging markets are reasonably priced at current levels.

Country Weighting of MSCI EAFE Index

Country	Weight	Qtr. Return	Contribution
United Kingdom	23.20%	-5.07%	-1.18%
Japan	21.78%	-7.44%	-1.62%

Fixed Income Market Overview

As of 6/30/2012

Total Returns for Period

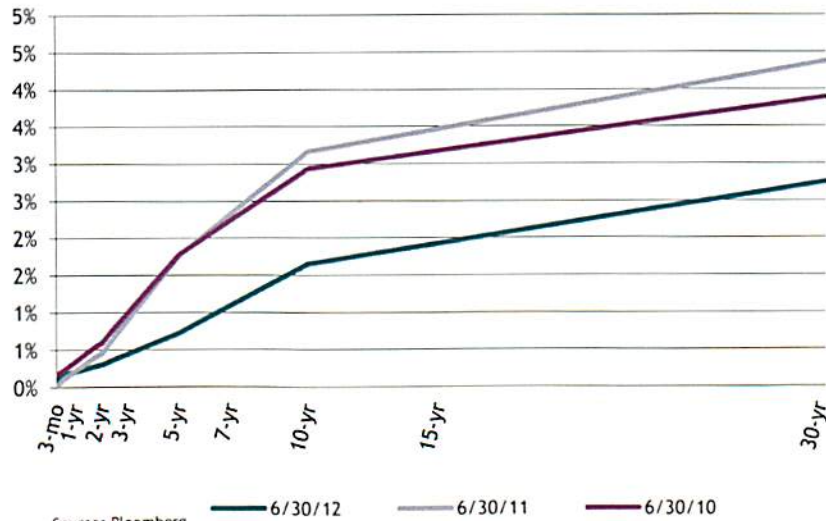

To quote Yogi Berra, "It's déjà vu all over again." For three years running, the economy and the markets have repeated a similar pattern. Non-farm payroll growth averaged 192,000 jobs per month in Q1 2011 and fell off to 130,000 in Q2 2011. Job growth averaged 226,000 per month in 1Q 2012 and then fell to a paltry 75,000 per month in 2Q 2012. Much like last year's rescue of Portugal (May 2011) and Greece (June 2011), this year's second quarter produced a Spanish bailout and the Italian slide to fiscal chaos.

Not surprisingly, interest rates followed a similar pattern. Treasury 10-year yields started the year at 1.88%, rose to 2.21% on March 31 and reached 1.65% at the year's mid-point. Unique to this year are the historic low yields we are experiencing. In the U.S. we have not seen rates this low since WWII. In Germany, 2-years Bunds are trading at negative yields. Think about that for a minute, investors are paying the German government for the privilege of loaning them money!

Fear is a powerful motivator and the fear trade is driving investors to the safe haven of U.S. Treasury securities. How low can interest rates go? Look at Germany. How long can they stay low? Look at Japan, their 10-year bonds have traded below 2.00% yields for over a decade. Europe, Fiscal Cliff, China slow down, one can see the fear trade overpowering fundamental analysis. As that great fixed income guru Yogi Berra said, "The future ain't what it used to be."

Investment Philosophy

The investment seeks long-term capital growth. The fund generally remains fully invested and be sector neutral compared to the S&P 500 index. It normally invests majority of assets in large-capitalization U.S. common stocks, small- and mid-capitalization and foreign stocks may also be purchased in keeping with fund objectives. The fund may invest in futures and options from time to time to manage flows of cash into and out of the fund.

Investment Philosophy

The Fund employs a "passive management" investment approach designed to track the performance of the Standard & Poor's 500 Index, which is dominated by the stocks of large U.S. companies. The fund attempts to replicate the target index by investing all, or substantially all, of its assets in the stocks that make up the index, holding each stock in approximately the same proportion as its weighting in the index.

Equity

Investment Philosophy

The Fund seeks to track the performance of a benchmark index that measures the investment return of mid-capitalization stocks. The fund employs a “passive management”—or indexing—investment approach designed to track the performance of the MSCI® US Mid Cap 450 Index, a broadly diversified index of stocks of medium-size U.S. companies. The fund attempts to replicate the target index by investing all, or substantially all, of its assets in the stocks that make up the index, holding each stock in approximately the same proportion as its weighting in the index.

□ Cash ■ Equity

Investment Philosophy

The Fund seeks long-term capital appreciation. The Fund invests primarily in common stocks of foreign growth companies. The Fund's manager seeks stocks of well-managed, quality growth companies that are expected to maintain superior growth, profitability and quality relative to other companies in the same industry worldwide. The selection of individual stocks through in-depth, bottom-up research is the Fund's primary focus. Industry sector allocation and country selection are the next most important investment criteria. The Fund invests primarily in developed market economies, but will generally invest about 10-35% of its assets in emerging markets.

[This Page Intentionally Left Blank]

Glossary of Terms

Accumulated Benefit Obligation (ABO) - Present value of liability for benefits, both vested and nonvested, based on compensation and service as of the actuarial valuation date.

Alpha - Measure of a portfolio's return in excess of the market return adjusted for risk. A positive alpha indicates that a portfolio was positively rewarded for the residual risk which was taken for that level of market exposure.

Average Maturity - An average of the amount of time remaining until final maturity for each fixed income security in a portfolio, weighted by the current market value of each holding. Stated average maturity is based on stated maturity dates and is typically longer than weighted average maturity, which takes into account assumptions, such as call dates or scheduled amortizations, that shorten the expected time required for the bondholder to receive repayment of principal.

Benchmark - A yardstick for measuring the effectiveness of an investment manager's performance. May be a published index, a blend of indices, or an average of any number of managed portfolios.

Beta - Measures the sensitivity of a portfolio to broad swings in a market index. A portfolio's measure of the expected change in return per 1% change in the return in the market. If a beta of a portfolio is 1.7, a 1% increase in the return in the overall market will result, on average, in a 1.7% increase in the return of the portfolio. The converse can also be true.

Cap - Market capitalization (cap) is the product of multiplying shares outstanding by share price. Median market cap of portfolio holdings is included as a factor for generating peer groups beginning in 1995. Market cap data listed for 1994 and earlier is average weighted market capitalization of portfolio holdings.

Composite - An aggregation of accounts managed by a firm, usually all discretionary accounts larger than \$1 million in assets, managed in the designated style.

Deciles - A way of using ranked arrays of data in 10% increments. For performance reporting, Decile One includes the best-performing 10% of records in the database universe; Decile Ten includes the worst performing 10%. For style characteristics used to form equity peer groups, Decile One indicates highest dividend yield, lowest price/book ratio, lowest price/earnings ratio, or highest market cap, while Decile Ten signifies lowest dividend yield, highest price/book ratio, highest price/earnings ratio, lowest market cap.

Duration - A measure of a fixed income portfolio's price sensitivity to changes in interest rates. Duration is expressed in years and is normally shorter than any of the average maturity calculations on the same portfolio.

Expense Ratio - An amount, expressed as an annual percentage of fund assets, that a mutual fund pays for operating expenses and management fees. Published returns on mutual funds are normally expressed net of all such costs.

Fund ("The Fund") - A term used to represent any commingled/pooled investment vehicle; e.g., mutual fund, investment company, bank pooled trust, insurance company "separate account," investment trust, et al.

Funded Ratio - Market value of pension assets divided by market value of pension liability.

Information Ratio - Indicates the investment manager's market risk-adjusted excess return per unit of residual risk relative to a benchmark. It is computed by dividing alpha by the residual risk over a given period of time. Assuming all other factors being equal, managers with lower residual risk achieve higher information ratio values. Managers with higher information ratios will add value relative to a benchmark more reliably and consistently.

Market Value - Unless otherwise noted, the market values used in this report are those provided by the client's bank trustee. A portfolio's total market value is the sum of principal and income assets listed in the trustee statement as of the reporting date.

Peer Group - Within the specified universe of the Hartland & Co. equity database, the ten manager records with the most similar style characteristics--dividend yield, price/earnings ratio, price/book ratio, and median market capitalization--to the portfolio being evaluated.

Projected Benefit Obligation (PBO) - Present value of liability for benefits, including an assumed rate of growth in future compensation.

R-Squared - A statistical measure that indicates the extent to which the variability of a portfolio's returns can be explained by market activity. It can also be thought of as measuring the diversification relative to the appropriate benchmark. An R-squared value of .85 indicates that 85% of the fluctuation in a portfolio return is explained by market activity. An R-Squared of 1 indicates that a portfolio's returns are entirely related to the market and is not influenced by other factors. An R-Squared value of 0 indicates that there is no relationship between the portfolio's returns and the market.

Real Return - Nominal total return reduced by the inflation rate for the same period.

Sharpe Ratio - A statistical measure developed by William Sharpe that determines reward-to-risk ratio. It is calculated by subtracting the 'risk free' return (usually 3-month T-Bills) from the portfolio return and dividing the excess return by the standard deviation of the portfolio. The result is a measure of return gained per unit of risk taken.

Glossary of Terms

Strategic Asset Allocation - A component of investment policy by which the client controls overall asset allocation in a disciplined, objective way.

Standard Deviation – A statistical measure of portfolio risk. It reflects the average deviations of the observations from their sample mean. Standard deviation is used as an estimate of risk since it measures the range of a portfolio’s returns. The wider the typical range of returns, the higher the standard deviation or returns, and the higher the portfolio risk.

Tactical Asset Allocation (TAA) - An investment management specialty in which the commitment to equities is varied drastically and frequently, based on the manager’s quantitative model, usually either a dividend discount model or a liquidity-factor model.

Total Return – Capital appreciation/depreciation, plus dividends and interest, less management fees. Unless otherwise noted, all returns in this report are net of fee. The basic formula is:

$$\frac{\text{Ending value} - \text{Beginning value} - \text{cash flows} - \text{Investment Advisory Fee}}{\text{Beginning value} + \text{Time weighted cash flow}}$$

Index Definitions

S&P 500 Index - A cap weighted composite of 500 U.S. Large Cap companies as defined by carrying unadjusted market capitalizations of \$5 billion or greater and a public float of at least 50%. The index represents roughly 75% of the total US equity market and therefore is an ideal proxy for the total domestic stock universe.

Russell Midcap Index - A representation of the mid-cap companies in the U.S. equity universe and is composed of the 800 smallest companies in the Russell 1000 Index as determined by market capitalization. The index reflects approximately 31% of the total market capitalization of the Russell 1000 Index. The Russell Midcap index is reconstituted annually. As of the latest reconstitution, it represents companies with a market capitalization range of \$18 billion - \$2.5 billion.

Russell 1000 Index - Measures the performance of the large-cap segment of the U.S. equity universe. It is a subset of the Russell 3000 Index and includes approximately 1000 of the largest securities based on a combination of their market cap and current index membership. The Russell 1000 accounts for approximately 92% of the U.S. market. The index is reconstituted annually and comprised of companies with a market capitalizations from \$468 billion to \$2 billion.

Russell 2000 Index - Is designed to capture the performance of the small cap sector of the U.S. equity market. It includes approximately 2000 of the smallest companies in the Russell 3000 index based on market capitalization and current index membership. This represents roughly 10% of the total market capitalization of the Russell 3000 Index. The index is reconstituted annually and the largest company based on market capitalization is \$2 billion while the smallest \$261 million.

Russell 3000 Index - The Russell 3000 Index measures the performance of the largest 3000 U.S. companies based on market capitalization and represents approximately 98% of the investable U.S. equity market. The index is reconstituted annually and it's constituents market capitalization ranges from \$456 billion to \$261 million.

MSCI EAFE Index - The MSCI EAFE Index (Europe, Australasia, Far East) is a free float-adjusted market capitalization index that is designed to measure the equity market performance of developed markets, excluding the US & Canada. As of June 2007 the MSCI EAFE Index consisted of the following 21 developed market country indices: Australia, Austria, Belgium, Denmark, Finland, France, Germany, Greece, Hong Kong, Ireland, Italy, Japan, the Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, and the United Kingdom.

MSCI Emerging Markets Index - The MSCI Emerging Markets Index is a free float-adjusted market capitalization index that is designed to measure equity market performance of emerging markets. As of June 2007 the MSCI Emerging Markets Index consisted of the following 25 emerging market country indices: Argentina, Brazil, Chile, China, Colombia, Czech Republic, Egypt, Hungary, India, Indonesia, Israel, Jordan, Korea, Malaysia, Mexico, Morocco, Pakistan, Peru, Philippines, Poland, Russia, South Africa, Taiwan, Thailand, and Turkey.

NAREIT All REITS - Represents the performance of publicly traded real estate investment trusts and is made up of approximately 200 REIT companies in 19 property sectors. The sectors are included but not limited to commercial office, real estate, retail, residential, lodging, self storage and health care properties. The NAREIT ALL REIT Index is maintained by the National Association of Real Estate Investment Trusts.

Index Definitions

NCREIF Index (NPI) - Represents a quarterly time series composite total rate of return measure of a very large pool of individual commercial real estate properties acquired in the private market. The index represents apartments, hotels, industrial properties, office buildings and retail properties which are at least 60% occupied and owned or controlled, at least in part by tax-exempt institutional investors or its designated agent. In addition these properties that are included must be investment grade, non- agricultural and income producing and all development projects are excluded. Constituents included in the NPI be valued at least quarterly, either internally or externally, using standard commercial real estate appraisal methodology. Each property must be independently appraised a minimum of once every three years.

Cambridge PE Index - Is a representation of returns for over 70% of the total dollars raised by U. S. leveraged buyout, subordinated debt and special situation managers from 1986 to December 2007. Returns are calculated based on the pooled time weighted return and are net of all fees. These pooled means represent the end to end rate of return calculated on the aggregate of all cash flows and market values reported by the general partners of the underlying constituents in the quarterly and annual reports.

DOW AIG Commodity - Is designed to be a reflection of highly liquid and diversified benchmark for commodities. The index is composed of futures contracts on 19 physical commodities including natural gas, crude oil, gasoline, heating oil, live cattle, lean hogs, wheat, corn, soybean, soybean oil, aluminum, copper, zinc, nickel, gold, silver, sugar, cotton and coffee. Index reconstitution occurs every January and is reported in U.S. dollars.

HFRI Funds of Funds Index - Is an equal weighted index designed to measure the performance of hedge fund of fund managers. The 800 multi-strategy constituents are required to have at least \$50 million in assets under management and a trading track record spanning at least 12 months. The index includes both on and offshore funds and all returns are reported in USD.

BarCap US Aggregate Bond Index - The U.S. Aggregate Index is constructed to represent U.S. denominated, investment-grade, fixed-rate taxable bond market of securities regulated by the SEC. It includes securities from the treasury, agency, corporate, mortgage backed , asset backed, collateralized mortgage backed sectors. As of April 1, 2007 U.S. agency hybrid adjustable rate mortgages were added. The index is considered is the most widely accepted representation of the U.S. bond market.

BarCap US Government - The index represents intermediate and long duration U.S. treasury securities, fixed rate bullet puttable and callable bonds and soft bullets spanning from 1-20 plus year maturities. State and local government bonds, treasury inflation protected securities, STRIPS, and treasury bills are excluded due to maturity constraints and to prevent double counting of a potential security for inclusion. Securities must be at least BBB rated, have at least a 1 year maturity and a minimum of \$250 million of outstanding issues. The index is reconstituted on a monthly basis.

BarCap Global Index - Started in 1999, the global aggregate is composed of three sub-indices; the U.S. Aggregate, Pan-European Aggregate Index, and the Asian-Pacific Aggregate Index. All three cover 94% of the overall market value of the Global Index. The remaining 6.4% is composed of eligible securities from the Global treasury, Eurodollar, Euro-Yen, Canadian, and Investment Grade 144A indices. In aggregate the index is created to be a broad-based measure of the performance of investment grade fixed rate debt on a global scale.

ML High Yield - The U.S. High Yield Index tracks the performance of below investment grade Us Dollar Denominated corporate bonds publicly issued in the US market. Qualifying bonds have at least one year remaining term to maturity, are fixed coupon schedule and minimum outstanding of \$100 million.

Appendix

This evaluation report has been prepared for the exclusive use of a specific client and no part of it may be used by any investment manager without permission of that client and Hartland & Co.

Evaluation of investment management contractors covers both quantitative and qualitative aspects. In addition to the investment performance evaluation, we monitor ownership structure, track key-employee information, and hold regular meetings with each investment management organization employed by our clients.

The data presented in this report have been calculated on a time-weighted rate of return basis. All returns are net of investment advisory fees, unless otherwise labeled.

Gross of fee returns do not reflect the deduction of investment advisory fees. Actual returns will be reduced by investment advisory fees and other expenses that may be incurred in the management of the account.

The performance data shown represent past performance. Past performance is not indicative of future results. Current performance data may be lower or higher than the performance data presented.

All performance data have been prepared under guidelines prescribed by the CFA Institute.

Returns for periods longer than one year are annualized. Each number is independently rounded.

A current copy of Hartland & Co.'s ADV-Part II is available to all clients upon request.
